

# News Release

For Immediate Release

The LEON Land Scraper Model 1700 is ideal for reclaiming valuable unused land.

## **LEON Land Scraper Line helping to make every acre count.**

Land prices are reaching new highs. With that in mind, it is now more important than ever to reclaim valuable unused land. Especially when you can take advantage of the new GPS technologies and make every acre count. LEON has 30 years of experience in manufacturing the LEON Land Scraper Line - designed for agricultural, rental and the light construction industry.

These Scrapers are well suited for ditching, drainage, road building and large landscaping projects. Tractor owners of 100 hp 500 hp Tractors will find a LEON Land Scraper to meet their needs. LEON scrapers are industrial from front to rear. Front Hydraulic Push Ejection allows the material to be pushed and leveled in one pass, and great blade visibility allows the operator to accurately fill and level the terrain.

LEON Land Scrapers feature a heavy duty ball type steering that permits steering in rough or difficult pulling conditions. The three piece replaceable cutting edge slices easily into hard packed ground - allowing the operator to fill the bucket completely with Horsepower to spare. LEON offers four different models M650 (6.50 cu. yd.), M1000 (10.12 cu. yd.), M1450 (14.5 cu. yd.) and the M1700 (16.93 cu. yd.). All four of these models have the option of side extensions.

Land prices are projected to rise even higher this year. LEON continues to lead the way in manufacturing hard working, dependable forced ejection Land Scrapers all built to protect your land investment. Call today for more information.
