

## NEWS RELEASE

### Rite Way Introduces New Generation of Rollers

**REGINA, SK April 27, 2009** Rite Way Mfg. Co. Ltd. is proud to announce the arrival of a whole new generation of land rollers.

Our new land rollers come in a size to fit the needs of every farmer – from 8' to an astounding 85'.

Whatever size you choose, all Rite Way land rollers have the narrowest transport width in the industry at a mere 12 1/2'. They can therefore be transported on any road or highway. And, they are extremely easy to tow.

Our land rollers are also the easiest to fold and unfold. Our **FORWARD™** unfolding system (patent pending) means you can fold and unfold your land roller by simply driving forward. This allows for several pieces of equipment to be used in tandem, and easily moved from location to location.

Our new generation of rollers is built on a module design, with one, three, five or seven sections. This system allows us to achieve practically any size required by the farmer, yet retain the narrow transport width. And, the module system also allows the roller to follow the contour of the land.

Rite Way land rollers are still the largest and the heaviest rollers on the market. They are being used wherever innovative farmers have learned that rolling their land after seeding allows for better germination, more even crop growth and easier harvesting. And, corn growers are using our land rollers as an important tool in their trash management program.

The new line of land rollers will be on display at the Western Canada Farm Progress Show in June.
